

SpacEyes 3D VIEWER

The consultation and circulation free tool

SpacEyes 3D **VIEWER**:

3D told in a new way: static, animated, informed, combined...

SpacEyes3D « Viewer » is a software, independent from SpacEyes3D « Builder », which allows fly-through and consulting, in real-time, of 3D projects already construct with **SpacEyes3D « Builder »**. The 3D projects performed with SpacEyes3D « Builder » are simply exported in « Viewer » projects, directly displayable.

With a concept close to SpacEyes3D « Builder » interface, the Viewer interface is simplified considering the number of activated functions. A friendly interface has been privileged in order to facilitate a quasi intuitive use of this software for all users.

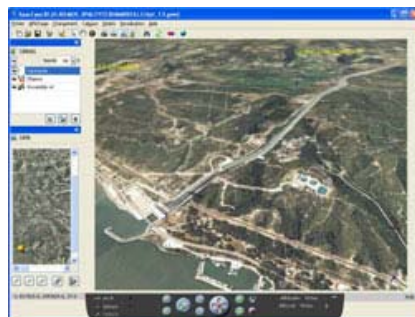

SpacEyes3D « Viewer » allows:

- Real-time 3D fly-through,
- Consultation of vectors and objects attributes, access to hyperlinks,
- The mapping localisation of the pointer (x,y,z),
- Ground measurements,
- Simultaneous display of the displacement on a 2D map,
- Anaglyph vision (for a better display and perception of the relief),
- 3D views registrations.

SpacEyes 3D **VIEWER**' INTERFACE

- The standard interface of SpacEyes3D « Viewer »

- The interface of SpacEyes3D « Viewer » can also be customised!
